

STAKEHOLDERS

MANAGERS

ProjectDox® gives companies and their project partners the freedom to organize and collaborate as a community, without limits.

Now your organization can easily create and extend a secure project environment for critical project information, documents, communication, and workflow processes.

COMMERCIAL DEVELOPMENT • ARCHITECTURE/DESIGN/ENGINEERING • CONSTRUCTION MANAGEMENT • DESIGN/BUILD

PROJECTDOX PROVIDES THESE KEY BENEFITS AND MORE

● No extra fees

ProjectDox is not provided as Software as a Service (SaaS), so there are no subscription, storage, or per-user fees. What's more, because you can amortize the cost of ProjectDox across all your projects — current and future — it's amazingly cost-effective to own, with investment recuperation in as few as 2 to 3 projects.

● Ownership of critical information

ProjectDox keeps your intellectual property and other critical data under your control, within your community environment. You can keep it that way with granular access control and a comprehensive audit trail of documents and correspondence, complete with sequencing, timing, and other details needed for resolving disputes.

● Manage risk more efficiently

Especially when deployed early in the project lifecycle, ProjectDox can help your team prepare for and then manage critical risk factors that impact the project and stakeholder perception.

● Make better decisions faster

ProjectDox helps you make better decisions faster by automating the notification process and expediting the latest, most accurate information between managers, architects, design engineers, contractors, and subcontractors — keeping response time to a minimum.

● Expedite RFIs, bidding, and change orders

Our workflow automation tools reduce hard costs and improve efficiency by streamlining and enforcing RFIs, bidding, change orders, and other key workflow stages.

● The competitive edge

ProjectDox helps you manage customer and partner needs and requests, thus building the trust that leads to long-term relationships.

PROJECTDOX AT A GLANCE

Our solution

- Allows customers to host in a data center of their choice
- Can normally be installed, configured, and online for use in 3 working days
- Provides the customer an unlimited number of projects and users
- Accelerated ROI — unlike SaaS, more projects and users = more value
- Is easy to use for administrators and end-users, ensuring rapid adoption
- Eliminates between \$50K and \$500K in tangible production and transport costs per project
- Presents multiple security options to control access and protect intellectual property; LDAP support
- Is accessible 24/7 via any web-enabled device, wireless form factors, and fax machines
- Includes a comprehensive search engine that indexes documents, drawings, notes, and e-mail text
- Offers custom e-form and workflow creation tools as well as pre-defined process maps
- Automates event notifications via e-mail and text messaging
- Provides threaded discussions for topics and notes
- Displays 200 2D and 3D file types with markup/tools, XRef support and document comparison
- Generates knowledge view reports for critical data and activity
- Is based on a services-oriented architecture for extensible features and third-party integrations
- Scales for global enterprise implementation

Feature highlights

● **Changemarks[®], overlay compare**

Project teams can use our advanced comparison tools to review and mark up/annotate more than 200 document/drawing formats — including DWG and PDF. Markup entities are tracked by author, date, and time. These features guide reviewers to each change in a set of documents, helping ensure that none are missed.

● **Intelligent e-mail inks**

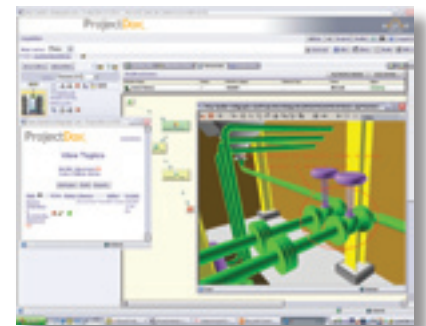

Instead of attaching documents to an e-mail, paste in a ProjectDox-enabled hyperlink. When the recipient clicks on the link, it will automatically bring them to the correct project, the correct document — and, if designated, the correct position on the document, or the appropriate discussion, topic, and note associated with it.

● **Workflow, e-forms creation**

ProjectDox workflow creation tools let you customize community processes to fit the way you work and collaborate. Visualize your processes by dragging and connecting workflow objects together (via Microsoft Visio), then quickly create the proper electronic forms using Microsoft Word.

Never lose sight of critical change again ProjectDox offers advanced document comparison tools such as Overlay, allowing users to see changes instantly!

See it in 3D! ProjectDox provides a variety of tools for 2D and 3D viewing, and supports NavisWorks' Freedom 3D viewer.
