

Electronic Plan Solution

It's time to go paperless.

Go paperless with ProjectDox®

ProjectDox® enables local government agencies to manage plan review and approval processes digitally — for land use, planning and development and construction — with a friendly user interface that works for staff and citizens alike.

With ProjectDox, you can reduce turnaround time, distribute work to multiple departments simultaneously, and comply easily with paperless initiatives.

City and county governments across the nation have put ProjectDox to work, and are reaping the benefits of key features including:

- Paperless online plan submission
- Parallel plan review and review
- Automatic change notifications
- Re submission and approval
- Online access to approved files

ProjectDox can be integrated with existing permitting software systems to enable an end-to-end electronic process, or used as a stand-alone solution. It can also help manage agency-sponsored construction projects and serve as an online repository of existing plans for use by multiple departments — such as police, fire, emergency first-responders and outside agencies (such as Homeland Security). The digital files and electronic processes used in ProjectDox also contribute to improved community crisis preparedness and disaster recovery capabilities.

Be Green!

Deploying ProjectDox will accelerate and improve the plan review process, while reducing the errors and frustration associated with paper-based methods.

The ProjectDox plan review process

When a citizen submits a permit request requiring plans, a ProjectDox “plan review project” is created automatically. The citizen receives an e-mail with an invitation to upload drawing files, which can be done anytime, from anywhere. Concurrently, the plan review supervisor and other department personnel are notified by e-mail from ProjectDox that a new permit requiring plans has been initiated, and when the plan files are uploaded the review begins.

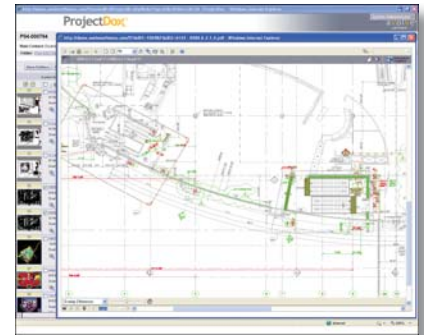

Utilizing highly structured ProjectDox workflows and e-forms, changes, re submissions (version control), notes and comments are managed and routed across multiple departments. Change notifications and other communications are exchanged between the plan review team and the citizen. All project activities are stored in ProjectDox for accurate analysis and a complete audit trail.

After the review process is complete, drawings are electronically stamped “Approved.” A PDF version can then be published for the citizen to download and print. Finally, subsequent notes made by the field inspection team can be added to ProjectDox documents via web-enabled mobile devices to insure that “as built” plans contain the most accurate information possible for archiving and use by emergency first-responders.

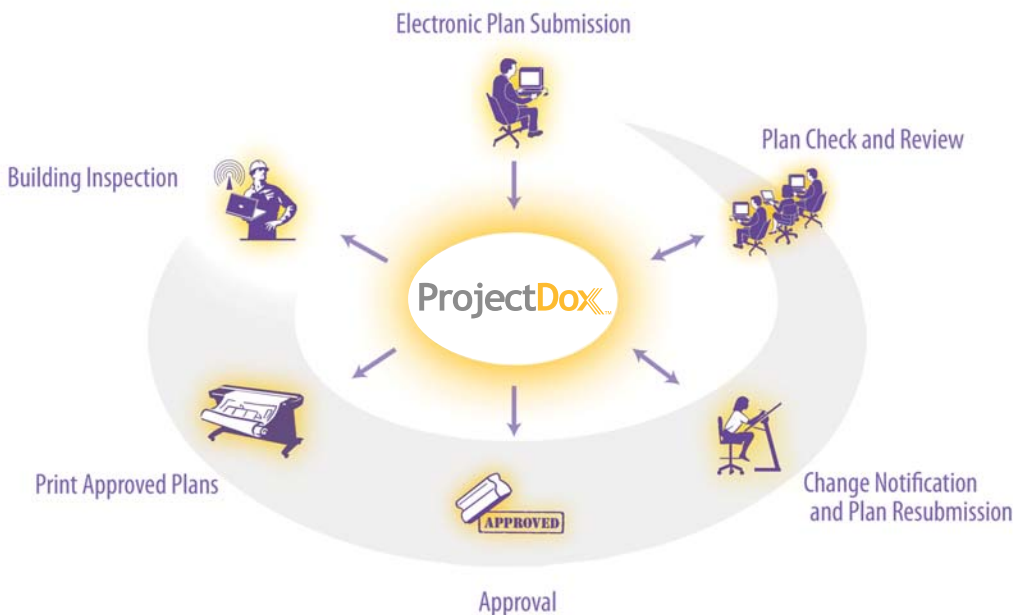

Other key ProjectDox benefits

- Creates an online service for citizens, with positive ecological impact
- Citizens have immediate access to review status
- No subscription fees — your agency owns ProjectDox and enjoys complete control

ProjectDox™

The Overlay Compare feature in ProjectDox instantly identifies changes between multiple versions of the same document, ensuring faster, more accurate plan review during resubmission.
